

## Network Design & Installation

We offer a full Network Design and Installation Service. All our engineers are Cisco Qualified and have a minimum of 5 years experience. We specialise in Microsoft and Linux based environments and work in both the commercial sector and the voluntary/charity sectors. We offer specially reduced rates for voluntary/charity/educational organisations.

If you require maintenance, we offer various packages tailored to suit your company needs. We do not support retainer based maintenance contracts as we believe that preventative servicing provides the best value to the customer. This is why when you take out a service arrangement with North East Computer Systems Ltd. you get something more for your investment.

We can help you develop your network to offer the extra functionality needed in today's environment, including remote and wireless access and VPN's.

NECS also offer full Virtualisation Environments using the latest VMware technologies. Our backup systems interact with a Secure Cloud Infrastructure to provide the most robust storage facilities available.
